NAME
>   ranline – select a line at random from a file

SYNOPSIS
>   **ranline** [**-h**] *file*

DESCRIPTION
>   The **ranline** utility selects a line randomly from the specified *file* and writes it to standard output.

OPTIONS
>   **-h**   Display a command synopsis and copyright message.

NOTES
>   The **ranline** utility has a 512-byte limit on line length. If it is used on files with lines longer than this, or on files that are not plain ASCII, the results are undefined.
