NAME
ranline – select a line at random from a file

SYNOPSIS
ranline [**-h**] [*file*]

DESCRIPTION
The **ranline** utility selects a line randomly from the specified *file*, (or, if no file is specified, from standard input) and writes it to standard output.

OPTIONS
-h   Display a command synopsis and copyright message.

NOTES
The **ranline** utility has a 1024-byte limit on line length. If it is used on a file with lines longer than this, or on a file that contains binary data, a truncated line may be returned.
