NAME
        psprint – print various types of files to a PostScript printer

SYNOPSIS
        psprint *file* ...

DESCRIPTION
        The **psprint** script invokes various helper programs, including **groff**, **gs**, **enscript**, **gzcat**, **zcat**, and **lpr** to
        format various types of files and print them to a PostScript printer.

FILETYPES
        The following types of files are supported:

        *.c *.h *.cpp *.hpp *.C *.H *.cc *.cxx *.hxx *.c++ *.h++ *.m *.i *.ii *.s *.S
                C, C++, Objective-C, and Assembler source files.

        *.pdf
                PDF documents.

        *.pdf.gz
                Gzipped PDF documents.

        *.pdf.Z
                Compressed PDF documents.

        *.ps *.eps
                PostScript files.

        *.ps.gz *.eps.gz
                Gzipped PostScript files.

        *.ps.Z *.eps.Z
                Compressed PostScript files.

        *.java
                Java source files.

        .[1-9] *.man
                Manpages.

        *.pl *.py *.sh *.csh *.*shrc
                Perl, Python, and shell scripts.

        *.txt *.log *.html *.xml
                Text files, log files, HTML and XML documents.

        GNUmakefile [Mm]akefile *.mak *.mk [Cc]onfigure *.m4 *.in *.ac
                Makefiles, Configure scripts, and autoconf/automake files.

                All other documents which appear to be ASCII text files are also supported.
